**United States Apeel
(Edipeel™) Product
Information Sheet**

INFORMATION
Edipeel™ is a thin, edible postharvest coating made from plant-derived materials that extends the shelf-life of fresh fruits and vegetables by slowing moisture loss and reducing oxidation.

STATEMENT OF COMPLIANCE
Edipeel is manufactured by Apeel Sciences™ in Santa Barbara, California, USA in accordance with 21 CFR 117 Current Good Manufacturing Practice, Hazard Analysis, and Risk-Based Preventive Controls for Human Food or equivalent standard if manufactured outside of the USA.

REGULATORY INFORMATION
Edipeel meets the Food and Drug Administration (FDA) requirements for qualification as Generally Recognized as Safe (GRAS) in the United States as a surface finishing agent. Edipeel is also considered Generally Recognized as safe allowed for use on all fruits and vegetables in Canada, Chile, China, Colombia, Japan, Kenya, Mexico, Peru, and South Africa, without restriction. Additionally, Edipeel is allowed for use on the following fruits in the European Union, Norway, Switzerland, and the United Kingdom: avocados, citrus fruit, mangoes, papayas, melons, bananas, pineapples, and pomegranates. Edipeel may be allowed for use in additional countries or regions not listed here.

INGREDIENTS
Edipeel is composed entirely of a mixture of food grade glycerolipids derived from edible plant oils, specifically the food additive mono- and diglycerides of fatty acids, which conform to the specifications set forth by the Food Chemicals Codex (FCC), Joint FAO/WHO Expert Committee on Food Additives (JECFA), and the European Union.

*Sanitary registration and / or licensing requirements for businesses and facilities utilizing Apeel products are the responsibility of the customer. Failure to comply with local and municipal laws is the responsibility of the customer to determine what sanitary registration and / or licensing requirements exist and to ensure compliance with any such requirements.

INSTRUCTIONS FOR USE
This product is intended for custom application and requires special mixing and use procedures. It should be applied by Apeel Sciences employees, or persons trained by Apeel Sciences.
Please call +1-877-926-5184 for instructions.

STORAGE
Store in a cool, dry environment.

COUNTRY OF ORIGIN
United States

CHEMICAL ORIGIN
Non-Animal

BSE/TSE STATEMENT
Animal products are not used as starting raw material ingredients or used in processing, including lubricants, processing aids, or any other material that might migrate to the finished product.

PRODUCT RESPONSIBILITY
To identify and mitigate social and environmental risk, product ingredients are evaluated in accordance with Apeel's risk mitigation process. In addition, suppliers of product ingredients are assessed in accordance with Apeel's Supplier Code of Conduct, as part of the Company's Supplier Responsibility Program.

Beyond the Surface Is Not So APEELing

Vaxxter | Maryam Henein

I don't know about you, but I'm not into eating **anything** coated by Bill Gates. 'No thank you' to trans-fat/ heavy-metal coated DARPA produce!

You may have recently purchased an avocado or an apple with a 'new' – which represents a new "protective coating." What exactly is this pr And is your health worth the hit just so your lemons are okay for a few more days?

Subscribe 

Once you've learned the ABCs of Apeel, you can make a well-informed, health-conscious decision to say "*Hell no!*"

Edipeel™ aka Apeel is a layer of processed fatty acids sprayed on the outside of fruits and vegetables post-harvest "to lock in freshness" and prevent them from oxidizing and going rancid.

According to Apeel's website:

"Apeel keeps produce fresh for longer, thanks to the help of a little extra 'peel.' Our plant-based protection slows water loss and oxidation, the primary causes of spoilage... Apeel is composed entirely of purified monoglycerides and diglycerides, edible compounds that can be found in a variety of foods. They are safe to eat as verified by regulatory authorities around the world, including Health Canada, the United States Food and Drug Administration (FDA), and the World Health Organization (WHO). In fact, they are so safe they can be found in products designed for the most sensitive populations, including infant formula and nutrition shakes for the elderly."

They claim Apeel is fully edible, but maybe that's because we've become accustomed to eating poisons. It's a crock.

When I tried to suss out the details about what is used to make Apeel, the information on their website and product information sheets was scant, to say the least!

United states edipeel product information sheet

[united-states-edipeel-product-information-sheet.pdf](#) • 654 KB

The assurance Apeel gives us is typical mumbo jumbo jargon: "Apeel products do not contain hazardous ingredients that will cause harm to people or the environment within the context of their intended use."

The Bill Gates company, which was started in 2012, is straight-up lying.

They list monoglycerides and diglycerides. Does anyone remember how horrible TRANS fats are for your health? And that New York City BANNED them from restaurants just a few years ago? Trans fats harden the arteries and can lead to arteriosclerosis. Monoglycerides and diglycerides may contribute to inflammation in the body. Inflammation has been linked to a range of chronic diseases including heart disease, diabetes, and cancer.

Additionally, the manufacturing of this “safe” food additive uses “processing aid residuals,” which are essentially heavy metals like lead, nickel, cadmium, mercury, toxic ash, and arsenic. So when consuming produce coated with Apeel, you are eating highly-processed overt fats, which contain toxic heavy metals. And then, along the way, they add different solvents to help with emulsification. So to me, this seems like a toxic poisoning operation.

Consider that there is no way to remove Apeel. You can’t wash it off. You can’t use other chemicals to get it off. You can’t mechanically rub it off and of course, it seeps into the fruits and vegetables.

And if you want to peel the Apeel, do keep in mind that the peel can drastically increase your nutrient intake as they frequently contain more nutrients than the rest of the fruit and veggies. For example, leaving the peel on a raw apple gives it about 332% more vitamin K, 142% vitamin A, and 115% more vitamin C than the peeled version!

And if you think you will just spring for organic, Apeel can be used on USDA Certified Organic produce. What a true travesty! Furthermore, you may not even know you’re eating Apeel-coated produce. Labeling laws and requirements vary from country to country and state to state. That means the product may or may NOT have the Apeel logo on the produce stickers. You won’t know unless you ask your produce manager. And they likely may not know either.

Countries selling produce coated with Apeel include the United States, Canada, Germany, the United Kingdom, France, Italy, Peru, Spain, Sweden, Norway, China, Australia, South Africa, Poland, and Japan. The EU, Switzerland, UK, and Norway are only allowing this coating to be applied to fruits and vegetables that have outer peels that are usually not eaten, while the US and other countries are allowing it on everything.

8. Can Apeel be used on USDA Certified Organic produce?

Yes! We have formulations that are OMRI Listed® for the growers and distributors of USDA Certified Organic produce. Apeel's products help reduce post-harvest food waste, over-packaging, and costly controlled-atmosphere storage.

Apeel has already secured the following partnerships:

- Nature's Pride (a large importer of Europe's avocados)
- Sage Fruit Co. (Washington State organic apple producer)
- Del Monte (avocados)
- Eco Farms (avocados)
- Del Rey (avocados)
- Horton Fruit Company (avocados)
- RV Aguacates (avocados)
- Alpine Fresh (asparagus)
- Beta (asparagus)
- Farm Direct Supply (asparagus)
- La Venta (asparagus)
- SiCar Farms (limes)

Many other fruits and vegetables including tomatoes, leafy greens, cucumbers, raspberries, as well as citrus can use the Edipeel coating, with undoubtedly more produce being added in the future. <https://www.apeel.com/find-us> even offers a store locator to find where their products are carried near you.

Apeel is (or will be) available at the following grocers:

- Costco
- Trader Joes

- Gelsons
- Ralphs
- Sprouts
- Vons
- Walmart
- Whole Foods
- Kroger
- Harps Foods
- Wakefern
- Price Right
- Fairway Market
- Target
- Bristol Farms and more

Beware and be warned!
